Einstein - simple Shell scripts

Upload the following scripts to Einstein until you pass all the tests.

Scripts must use the names below.

1. dr.sh

- List files in current directory, in reverse order. See "man ls" for the switch to use.

2. peekpass.sh

- Display contents of **Password file**

3. scot.sh

- Assume that the current directory contains a file `macbeth.htm` (which is the complete play Macbeth).
Your script is to print the lines in the file containing the string "Scot" (in that case).

Tip: Test your script on the file:

```
/users/tutors/mhumphrysdculab/share/shakespeare/macbeth/complet
```

Then change the script to search `macbeth.htm` and upload that script.

4. scot2.sh

- Same as above except script is to print lines in `macbeth.htm` containing "Scot", *ignoring case*.

5. alldir.sh

- List all directories underneath **/etc**
- Use "find".
- I want the full paths of the directories, like:

```
/etc/subdir
```
